RTE embodiment
(case study: ‘D’ group’s RTE$^+$)

KAIST Prof. Soung-Hie Kim

RTE$^+$ is redefined concept of Gartner’s RTE to apply it into business management efficiently with exclusive and inclusive RTE structure.

‘D’ group defines RTE as “company that has real time response on the environmental changes of internal and external business management so maximize management efficiency and competitiveness.” and has the following properties.

- Removes time delay during the business performance processes
- Minimizes gaps between plans and operation
- Removes risks of business management with early warning

DIT is one of the leading companies to realize RTE with self developed RTE$^+$ methodology.
